( 100% recycled non-woven polypropylene  
 6-bottle wine tote with grommet reinforcements )

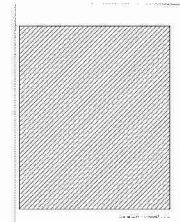

( Eco-jute single wine tote  
 with custom bamboo handles )

## Fireflies on Demand

The fun of flashing and flickering fireflies or lighting bugs now can be enjoyed virtually anywhere and at anytime with new Firefly Magic Firefly Lights. This novel technology makes the fireflies randomly flash on, flicker and fade off and operates on solar energy or two regular AA batteries. The lights are designed to be easily placed in bushes, trees and backyard landscapes with each little firefly on its own individual wire and able to cover an area from 13- to 24-feet wide. Visit [www.fireflymagic.com](http://www.fireflymagic.com).

## Video Tattoos

A Santa Monica company has developed cool new technology that embeds lightweight, portable video systems in jackets, T-shirts, notebooks and name badges that can serve as a walking promotion or a big draw to a trade show display. Currently, the products are available for rental only and have a run time of three hours for a video badge and four hours for a larger screen, with additional power sources available. Any durable garment can be modified to include Video Tattoo, and the range of the audio is about twice the normal amount of personal space. Check it out at <http://videotattooinc.com>.

## Eco Chic

Envi Reusable Bags have recently announced the introduction of PET—an ultra-sustainable fabric made from recycled soda bottles—to the U.S. and Canadian markets. PET's thicker and more durable material lasts longer than other reusable bags and can be ordered in different styles, sizes and design. The PET bags also can be customized with zippers, grommets, insulation, wine pockets and more. For more details, visit [www.envireusablebags.com](http://www.envireusablebags.com).
